CONNECTING A COMPLIANT WORKFORCE

Pegasus™
an Avetta Company

The Pegasus Asset Management solution collects, compares and verifies plant assets to your specific standards, allowing you to manage the assets on your sites and projects.

Pegasus
an Avetta Company

Monitor the **condition and safety** of assets on your **sites and projects**

asset management

BUSINESS REGISTRATION

A chosen administrator from a contracting business enters their business number and details to register for an account in the Asset Management Portal. Once approved, they receive login details to manage their profile and assets.

## ADD ASSETS AND PAY FOR THEIR REGISTRATION

The administrator adds details of the asset, including its make and model, and pays for its registration.

UPLOAD DOCUMENTS

With their asset in the system, the administrator will upload documents for its compliance. These documents depend on the asset, and may include registration, maintenance history, and plant specifications.

PEGASUS VALIDATES ASSET

Pegasus will validate the documents and information uploaded for assets during registration, and the company administrator will be emailed if there are any issues. Ongoing notifications will also be sent to ensure the asset remains compliant.
