

Uncovering connections **to manage your risk**

Analytics in the Pegasus Client Portal

There is insight in the robust data of your Pegasus solution – about your contracting companies, workers, and sites.

And right now – during COVID-19 – there is a greater need to understand, report, and respond to that information; to find the connections and manage risk on your site.

**Build your
own insights,
in real time,
all from one
place.**

ANALYTICS IN THE PEGASUS CLIENT PORTAL EMPOWERS YOU TO :

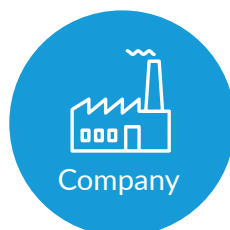

- learn trends and drill down for more insight - including into workforce compliance
- use predictive analytics to determine future events
- give your team an at-a-glance view of the workforce using dynamic charts and graphs
- quickly mobilise workers and crews to site, searching by role or competency
- visualise metrics that would otherwise be difficult to find
- uncover the full worker and company work cycle
- track technical support calls through to completion

COVID-19 WORKFORCE MAPPING

A new module in Analytics gives you complete visibility into any COVID-19 risk on site. When Pegasus client, Visy, had to provide a COVID-19 Management Plan to local authorities, R & M Manager Grant Crosley turned to Pegasus to create a new module to show how that risk was being managed. Using the comprehensive data in the Pegasus solution, Grant and the Visy team can now:

- Review a complete COVID-19 heat map, showing where workers live and which hotspots they have come from
- Have the information from their Client Portal matched to government data
- Filter the data in the heat map by:

The COVID-19 Workforce Mapping module empowers Grant and Visy to take action to manage risk on site with real-time data to support their organisational response – whether that be temperature and other health checks, or liaising with contractors about which workers cannot attend site because they live in a hotspot.

Using the module in Analytics, Visy has proven to authorities and the community that the COVID-19 risk is being managed on its sites.

KEY ANALYTICS FEATURES

Leverage your Pegasus Solution

Be empowered to build your own insights and manage your operations into the future by acting on the trends and data you can see today.

Configured to your standards

User access and reporting is configured to analyse data on companies, workers, and sites. Real-time data includes analysis of roles, logpoints, attendance, and competencies.

An Intuitive Interface

You manage the Analytics interface. Connect with Pegasus to determine your user levels and custom brand your cloud solution in one, consolidated, feature.

Ready to use the data in your Pegasus solution for insight and risk management?

Speak to your Pegasus Account Manager or email info@pegasus.net.au to start using Analytics.
