

# Fatigue management with Pegasus

Fatigue is exhaustion that reduces an employee's ability to work safely. At work, fatigue can result in a lack of alertness, slows down reactions, and affects a worker's ability to make good decisions.

## ACCESS CONTROL

### What it is:

Each worker **logs in and out at an access point** (mobile, logpoint, kiosk) at the beginning and end of each shift at your site using their Pegasus access ID card.

### What it does for you:

With each access ID card connected to the worker's profile in your workforce management solution, you have **full visibility and insight** into the hours they are working.

## FATIGUE ALERTS & REPORTS

### What it is:

Each site sets a **fatigue alert limit** (the maximum number of hours a worker may be on site per shift), which are then triggered for each worker who overstays at site.

### What it does for you:

Fatigue alerts, emailed to your site and project supervisors, give you **visibility into the hours of your workforce**. Details about overstayers allow you to assess the risk of them working for you, and to manage your workforce accordingly. You may report on worker fatigue limits over a single day or a seven day period.

## FATIGUED WORKERS ARE UNSAFE WORKERS

Pegasus helps you manage the fatigue of your workforce and reduce the risk of incidents and injury in your workplace.

*Ensure a safe and alert workforce with Pegasus.*
