

# Limitless Learning

## The Pegasus LMS

**As you grow, managing the safety of a large, disperse workforce is an increasing challenge.**

Completing inductions and training courses is often tied to safety outcomes and legislative requirements, and many organisations are at risk when they need to prove their workers are inducted.

The Pegasus Learning Management System (LMS) empowers you to plan and set training for your workforce - and to track and report on the results - online, at any time.

**From wherever and whenever suits them, with the click of a button, workers are trained and ready to go before work begins.**

# 7 Reasons to Integrate the Pegasus LMS

1

Save time

Online Pegasus LMS courses can be completed any time, from any device, by any number of workers. The Pegasus LMS enables blended training – setting and booking classroom training online – to fit the delivery of your instruction. **Save hours of time compared to traditional, manual planning and delivery.**

3

Align to and expand your message

Courses can be updated at any time in the Pegasus LMS to align with compliance changes or real-time updates. **The dedicated Pegasus eLearning team are your resource to shape and update your messages and keep your workforce safe and on track.**

2

Save money

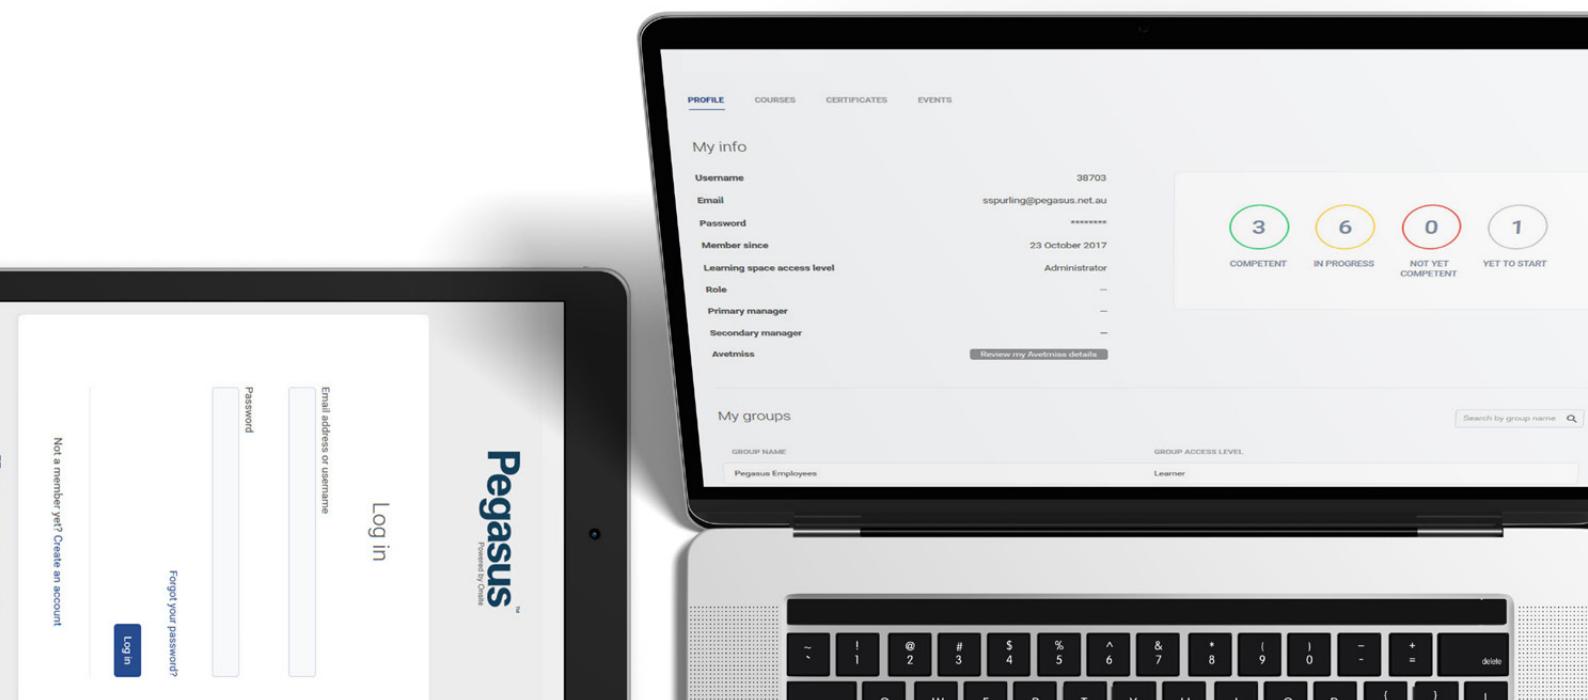

With courses or classroom bookings completed online, the Pegasus LMS can remove the need for paper products, and even physical classrooms and travel related to training.

**The scalability of training with Pegasus empowers fast, cost-effective, and repeatable learning outcomes.**

4

Track progress and performance

Exams and quizzes linked to your training and courses keep track of how well workers are understanding and retaining the information needed to keep them safe. **This data helps you identify and address skills gaps on the spot to get your workers trained.**

# 7 Reasons to Integrate the Pegasus LMS

5

## Retraining and reminders

To support safety and compliance, the Pegasus LMS retains when a worker's last training was completed and when it is due for renewal. Auto-reminders promote continuous improvement and reduce risk by ensuring every worker's knowledge is up to date.

6

## Engaging and flexible

The Pegasus LMS allows you to create comprehensive and practical multimedia learning content. Video, images, animation, audio and text are great tools to engage workers who are learning new information.

7

## Real-time reporting and meaningful analytics

Create, download and share detailed reports on the progress of training, data on course completion, and other important analytics in the Pegasus LMS. Evaluating the training and progress of your workers gives you full insight into the safety of your workforce, reducing your risk.

“

*Previously, we got everyone in one day early for inductions at \$400 per person. Around 130 people would be required for a four-hour classroom induction. To put the same induction online with Pegasus, we easily saved over \$50,000 before even starting work.*

*Resource Procurement Manager, ARTC*

”

# How do I know if I need the Pegasus LMS?

Do you have more than 150 employees who need regular training?

Do you need to adhere to safety legislation and prove your workers are inducted and trained?

Do you need to better manage the risk of untrained workers being on your sites and projects?

Do you have a disperse workforce you need to update about your requirements, quickly?

Do you lack the time and money to spend on solely face-to-face classroom training?

---

If you answered **yes** to any of the above you could benefit from the Pegasus LMS
